Fee Schedule Update

J. Curran, ARIN President and CEO

23 April 2013

New ARIN Fee Schedule

- Aligns the ISP IPv4 and IPv6 fee schedules for ISPs into a single set of registration services plans based on total resources held

- Provides $100/year end-user maintenance fees per address block and ASN number

- Legacy resource holders under agreement fees same as end-user fees

- Fee schedule structure was presented at ARIN 30 in Dallas in October, followed by formal community consultation

ARIN31

New ARIN Fee Schedule (more)

- Adopted by the ARIN Board in January 2013, effective 1 July 2013

- Corrected typo in original schedules regarding xx-small category and IPv6 resources

- Implemented fee estimator tool in ARIN Online to allow users to calculate revised fees

- Note – Each organization ID (OrgID) receives one invoice covering all resources held

- Fee change is revenue neutral for ARIN; it provides for a long-term stable fee structure

ARIN31

Community Discussion

- While the original consultation had only modest community discussion, we have benefited from an abundance of discussion since that time…

Suggestions for fee restructuring have included:

- Additional IPv6 fee waivers
- Fee structure based on organization revenue size
- Fee structure based on number of total resource records held
- Fee structure linear to total IP addresses held

ARIN31

Fee Structure Review Committee

- The ARIN Board of Trustees has directed the Finance Committee to convene a Fee Structure Review committee which shall include selected volunteers from the community, will consider various long-term fee structures, and report back to ARIN Board prior to the ARIN 32 meeting

(Volunteers needed – Please email jcurran@arin.net if interested)
