## **IPv6 Case Studies**

Susan Hamlin, Senior Director  
Communications and Member Services

# Share your IPv6 progress

- When we conduct IPv6 outreach, people ask “what have others done?”
- **So, we need your help!**
- If you have an IPv6-enabled website, IPv6 deployed on your networks or added into your products, let us develop a case study about your organization

# What to expect

- We'll make it easy for you tell your story and highlight your accomplishments
- Speak with us to answer questions like:
  - What drove your decision to adopt IPv6?
  - What specific steps did your organization take to deploy IPv6?
  - What obstacles did you encounter?
  - How did you overcome them?
  - What advice would you give to others going through the same process?

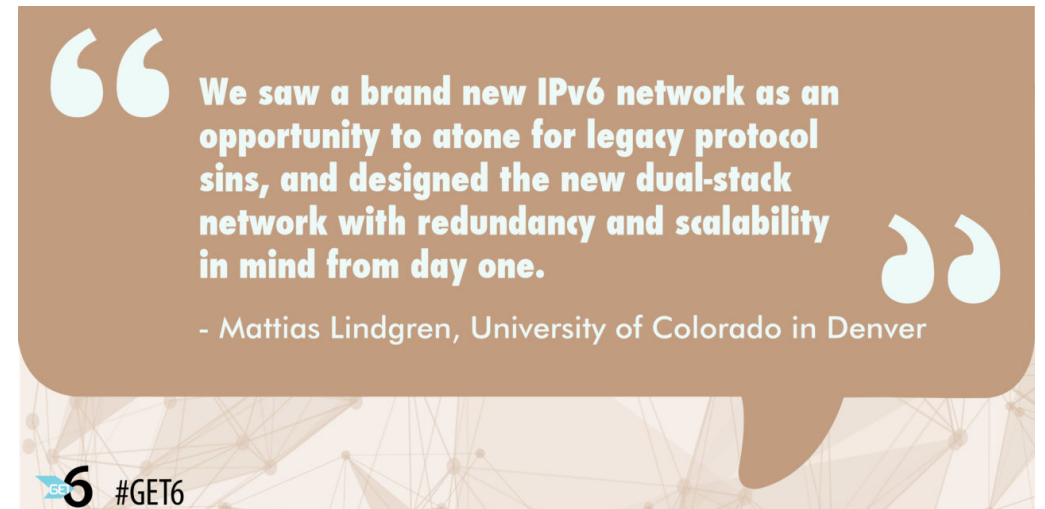

# Examples

“ NTT has been offering ipv6 dual stack globally since 2001. For the past several years all existing and new customers are assigned a /126 WAN and encouraged to either obtain a IPv6 allocation from ARIN or use a /64 or /48 from NTT. To date, a large majority of customers have turned up IPv6 with us. [www.us.ntt.net](http://www.us.ntt.net) is also IPv6 enabled. ”

Kevin Pack  
Senior Engineer, Customer Engineering,  
Global IP Network

“ We saw a brand new IPv6 network as an opportunity to atone for legacy protocol sins, and designed the new dual-stack network with redundancy and scalability in mind from day one. ”

- Mattias Lindgren, University of Colorado in Denver

We've started inviting organizations that have both ARIN IPv6 space and IPv6-enabled websites to contribute. You're invited too!

## IPV6 CASE STUDIES

Now is the time to Get6, but you don't have to take our word for it. Hear detailed accounts from organizations that have already made progress on their IPv6 journey.

Want to work with us to develop your IPv6 case study? [Let us know!](#)

### University of Colorado Denver

IPv6 @ University of Colorado Denver

Mattias Lindgren of UC Denver details how he spearheaded the effort to enable IPv6 across 2 campuses and explains why adopting IPv6 is no longer optional

### Washington & Jefferson College

Charles R. Watts III of Washington & Jefferson College compares IPv6 to anything else in the IT industry that you have to put in the time to
